

**AMENDMENTS TO THE CLAIMS**

1. (Currently Amended) An integrated mirror comprising:  
an inside mirror part for reflecting an inside field of vision of behind a vehicle;  
an outside mirror part for reflecting an outside field of vision of behind the vehicle;  
and

coupling means for coupling the inside mirror part and the outside mirror part so that  
their respective mirror faces are parallel,

~~characterized in that~~ wherein the inside mirror part and the outside mirror part are  
arranged to reflect predetermined regions of the inside field of vision and the outside field of  
vision, respectively, of behind the vehicle when seen from a virtual view point determined in  
accordance with a driver's view point position determined using predetermined physique  
data, and the inside mirror part and the outside mirror part are disposed at a height above the  
driver's view point position.

2. (Cancelled)

3. (Previously Presented) The integrated mirror of claim 1, further comprising  
attaching means provided part-way along the coupling means and mounted rotatably in an  
upper part of the vehicle exterior part, and the inside mirror part and the outside mirror part  
move in linkage about the attaching means as a center of rotation.

4. (Original) The integrated mirror of claim 3, wherein the mirror position is adjustable by moving the inside mirror part.

5. (Previously Presented) The integrated mirror of claim 1, 3 or 4, wherein the vehicle exterior part is left and right front pillars.

6. (Cancelled)

7. (Cancelled)

8. (Previously Presented) The integrated mirror of claim 5, wherein the virtual view point is provided in front of the front pillar and within a range of height from the ground to the vehicle height.

9. (New) The integrated mirror of claim 1, wherein the inside mirror part and the outside mirror part are on different planes that are parallel to each other.

10. (New) The integrated mirror of claim 1, wherein the inside mirror part and the outside mirror part have different shapes.

11. (New) The integrated mirror of claim 3, wherein the outside mirror part is coupled to the coupling means by a pivoting joint.

12. (New) The integrated mirror of claim 3, wherein the attaching means is moveable up and down the vehicle exterior part so that the height of the inside mirror part and the outside mirror part is adjustable so as to be maintained in a position above the view point position of various drivers having different heights.
